

Wireless Barcode Scanner User's Manual

Introduction

Wireless barcode scanner transfer the scanned data to receiver wirelessly ,then the receiver transfer data to computer terminal, the scanner is powered by the inserted lithium battery, please charge battery in time if low power.

It is recommended to fully charge the battery on first use. The receiver and scanner have been paired already in default. If you want to re-pair, just scan the pair code on receiver. If the pair code is missing, refer to the 1.8 pairing method.

The setting is divided into scanner part and receiver part. You can restore all settings to factory default with below steps:set scanner to default->pairing scanner with receiver (ignoring this step if paired)->set receiver to default.

“ * ” default setting.

Part one : Scanner Setting

1. Set scanner to default

2. Working mode

Immediate

(The scanned data will be not stored in scanner ,it will be directly transferred to receiver. There will be LED flashing and beeper as reminder if transferring failed.)

*Auto

(The scanned data will be stored in scanner when no signal. Data will be transferred to receiver when signal recover.)

Inventory Input

(The scanned data will be stored in scanner and not transferred to receiver.)

Inventory Output

(All data stored in scanner will be transferred to receiver and the scanner automatically enter the inventory input mode after data is fully transferred.)

Multiple Inventory Output

(Transferred the last time scanned code data, do not need to delete the data, scan the NO.10: Clean the stored data)
